### THERMINOL<sup>®</sup> SP

heat transfer fluid

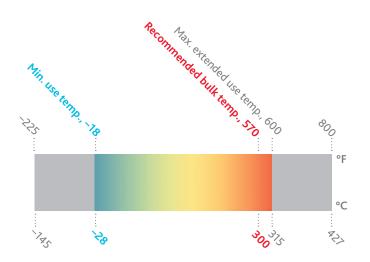

Trusted, mediumtemperature-range fluid

# -28° to 300°C (-18° to 570°F)

# THERMINOL<sup>®</sup> SP

heat transfer fluid

Eastman Therminol<sup>®</sup> SP heat transfer fluid is a unique, synthetic fluid designed to provide reliable, consistent heat transfer performance over a long life at recommended bulk temperatures up to 300°C (570°F).

- Delivers excellent cost performance over the fluid life when compared to common mineral oil-based heat transfer fluids, even when operating temperatures reach a maximum extended use temperature of 315°C (600°F)
- More readily pumpable at low temperatures than the majority of other mineral oil-based heat transfer fluids
- Savings in capital, operations, and maintenance costs are often achieved when used in applications that traditionally use steam as a heating medium

Therminol SP is available in Europe, the Middle East, and Africa. Contact your local Eastman Therminol sales representative for more information.

### Physical and chemical characteristics

Therminol SP fluid is designed for use in nonpressurized/lowpressure, indirect heating systems. It delivers efficient, dependable, uniform process heat with no need for high pressures. The high boiling point of Therminol SP helps reduce the volatility and fluid leakage problems associated with other fluids.

The recommended bulk and maximum film temperatures for Therminol SP are based on industry-standard thermal studies. Operation at or below these temperature maximums can provide long service life under most operating conditions.

Actual fluid life is dependent on the total system design and operation and can vary by heat transfer fluid chemistry. As fluid ages, the formation of low- and high-boiling compounds may result. Low-boiling compounds should be vented from the system as necessary to a safe location away from personnel and sources of ignition and in compliance with applicable regulations and laws. The high-boiling compounds can be very soluble in the fluid. Significant overheating or fluid contamination will accelerate decomposition and may result in increased high-boiler and solids concentrations. Excess solids can typically be filtered for removal.

Therminol SP has been shown to be significantly less sensitive than mineral oils to the negative consequences (sludging, fouling) of thermal oxidation. Eastman recommends that systems using Therminol SP fluid be blanketed with an atmosphere of inert gas to protect against the effects of fluid oxidation on its performance and life expectancy. Pressure relief device(s) should be installed where required.

Therminol SP is noncorrosive to metals commonly used in the construction of heat transfer systems.

While Therminol SP has a relatively high flash point, it is not classified as a fire-resistant heat transfer fluid. Consequently, the use of protective devices may be required to minimize fire risk, and users of Therminol SP should check with their safety and risk management experts for specific instructions.

#### Typical properties<sup>a</sup>

| Appearance   | Clear, yellow liquid                             |
|--|--|
| Composition  | Synthetic hydrocarbon mixture                    |
| Recommended bulk temperature   | 300°C (570°F)                                    |
| Maximum extended use temperature   | 315°C (600°F)                                    |
| Maximum film temperature   | 335°C (635°F)                                    |
| Normal boiling point   | 351°C (664°F)                                    |
| Pumpability, at 300 mm <sup>2</sup> /s (cSt)   | -8°C (17°F)                                      |
| Pumpability, at 2000 mm <sup>2</sup> /s (cSt)  | –28°C (–18°F)                                    |
| Flash point, COC (ASTM D92)  | 193°C (379°F)                                    |
| Autoignition temperature (ASTM E659)   | 366°C (691°F)                                    |
| Autoignition temperature (DIN 51794)   | 382°C (719°F)                                    |
| Pour point (ISO 3016)  | –54°C (–65°F)                                    |
| Minimum liquid temperatures for fully developed turbulent flow ( $N_{\mbox{\tiny Re}} > 10,000)$ |  |
| 10 ft/s, 1-in. tube (3.048 m/s, 2.54-cm tube)  | 67°C (152°F)                                     |
| 20 ft/s, 1-in. tube (6.096 m/s, 2.54-cm tube)  | 45°C (114°F)                                     |
| Minimum liquid temperatures for transitional region flow ( $N_{\text{Re}} > 2000$ )              |  |
| 10 ft/s, 1-in. tube (3.048 m/s, 2.54-cm tube)  | 24°C (75°F)                                      |
| 20 ft/s, 1-in. tube (6.096 m/s, 2.54-cm tube)  | 11°C (52°F)                                      |
| Coefficient of thermal expansion @ 200°C   | 0.000961/°C (0.000534/°F)                        |
| Heat of vaporization at maximum use temperature  | 228 kJ/kg (98.1 Btu/lb)                          |
| Average molecular weight   | 320  |
| Pseudocritical temperature   | 512°C (953°F)                                    |
| Pseudocritical pressure  | 13.2 bar (191 psia)                              |
| Pseudocritical density   | 258 kg/m <sup>3</sup> (16.1 lb/ft <sup>3</sup> ) |
| Moisture content, maximum (ASTM E203)  | <150 ppm   |
| Dielectric constant @ 23°C (ASTM D924)   | 2.23   |

<sup>a</sup>Recommended bulk temperature 300°C (570°F). These data are based on samples tested in the laboratory and are not guaranteed for all samples. Contact us for complete sales specifications for Therminol SP fluid. <sup>b</sup>Liquid enthalpy basis is -17.8°C (0°F). <sup>c</sup>1 cSt = 1 mm<sup>2</sup>/s and 1 mPa•s = 1 cP. <sup>d</sup>100 kPa = 1 bar. <sup>c</sup>Maximum extended use temperature is 315°C (600°F).

# Liquid properties of Therminol<sup>®</sup> SP heat transfer fluid by temperature<sup>a</sup> (ENGLISH UNITS)

### **TLC Total Lifecycle Care**<sup>®</sup>

Eastman's TLC Total Lifecycle Care<sup>®</sup> program is designed to support Therminol customers throughout their systems' life cycle. This comprehensive program includes system design support, start-up assistance, training, sample analysis, flush and refill fluids, and our fluid trade-in program. In North America, call our hotline at 1-800-433-6997 or contact your local sales or technical representative.

### In-service heat transfer fluid sample analysis

When Therminol heat transfer fluids are used within suggested temperature limits, they may provide years of trouble-free service. To help users get maximum life, Eastman offers testing of in-service heat transfer fluids to detect contamination, moisture, thermal degradation, and other conditions that may impact system performance. This comprehensive analysis includes acid number, kinematic viscosity, insoluble solids, low boilers, high boilers, and moisture content. Additional special analyses are available on request. Sample analysis includes sample collection kits that are easy to use. Most systems should be sampled annually. Users should also sample anytime a fluidrelated problem is suspected.

#### my**THERMINOL**

Results of the test are presented in a detailed report that provides suggestions for corrective action. Test results are stored in a database for future reference. Customers can access their specific test information via my.therminol.com.

#### **Technical service hotline**

Experienced technical service specialists can help answer your questions regarding heat transfer fluid selection, system start-ups, system design, and operational issues.

#### System design support

Eastman regularly assists some of the world's largest engineering, chemical, and equipment manufacturing companies on the design and operation of heat transfer systems. Our liquid phase and vapor phase design guide information and system design data have been field tested in numerous installations. Eastman also conducts engineering seminars for customers, engineering firms, and equipment manufacturers to cover a wide range of heat transfer fluid system design and operation issues. Customers can request a technical service visit to audit heat transfer systems for fluid loss and leak prevention opportunities.

#### **Operational training**

Eastman believes that by sharing our experience with customers, we can help improve system design, promote safety, and reduce overall cost. Customers can take advantage of Eastman's heat transfer system operation and product training programs. These programs are customized to suit the varied needs of frontline technicians, operations supervisors, maintenance technicians, and design engineers. Customers can also receive training assistance for dealing with important topics like fluid safety and handling.

#### Safety awareness training

At Eastman, we're "All in for Safety." We provide our customers safety awareness training that focuses on the design, start-up, operation, and maintenance of heat transfer fluid systems.

#### Start-up assistance

Eastman provides start-up assistance by reviewing procedures and offering suggestions to reduce typical problems. Customers can also receive help by calling their local Eastman technical specialist or through on-site assistance.

#### Flush fluid and fluid refill

Liquid phase heat transfer systems can be cleaned with Therminol<sup>®</sup> FF flushing fluid. After the system is flushed, the appropriate liquid phase Therminol heat transfer fluid can be added.

#### Fluid trade-in program\*

As part of our commitment to sustainability and the environment, Eastman offers a trade-in program for used Therminol and competitive heat transfer fluids. Depending on the fluid and its condition, it may be turned in for potential credit toward the purchase of new Therminol heat transfer fluid.

\*Available in North America. Contact your local sales representative for more information.
