PRODUCT INFORMATION

VALVOLINE[™] ZEREX[™] DEX-COOL[®] ANTIFREEZE COOLANT

Valvoline ZEREX DEX-COOL Antifreeze Coolant is a patented* carboxylate formulation with a service life of up to five years or 150,000 miles. It incorporates state-of-the-art organic acid technology in an ethylene glycol base for protection of all cooling system metals including aluminum. **ZEREX DEX-COOL** antifreeze coolant is approved by General Motors to the GM 6277M specification

ZEREX DEX-COOL antifreeze coolant contains no phosphates, silicates, borates, nitrates, amines and nitrites. Its global formulation meets the phosphate-free requirements of European automobile manufacturers and the silicate free requirement of Asian automobile manufacturers like Toyota, Scion, Acura, Hyundai, Kia, Honda, Isuzu and others. It can be mixed with any DEX-COOL[®] and is approved by Opel, Dae Woo and Saab. It is dyed orange to distinguish its unique chemistry from traditional green and yellow silicate coolants.

When diluted 50% with water, **ZEREX DEX-COOL** protects modern engine components from winter freezing and summer boiling. The chart at the top right provides detailed mixing information. **ZEREX DEX-COOL** antifreeze coolant is storage stable for up to five years as both a concentrate or diluted with water. It contains a high quality defoamer and will not harm gaskets, hoses, plastics or original vehicle paint.

Valvoline ZEREX DEX-COOL Antifreeze Coolant is formulated to meet or exceed the following antifreeze specifications:

ASTM D3306	GM 6277M, GMW 3420
SAE J1034	DEX-COOL [®] APPROVED
SAE J1941	Federal Spec A-A-870A
SAE J814	Fiat Chrysler MS-12106
Ford WSS-M97B44-D	Simens Wind Turbines
Ford WSS-M97B44-D2	TMC of ATA RP-302B
Saab, Opel Approved	

Valvoline recommends that spent coolant never be disposed of by dumping into a septic system, storm sewer or onto the ground. Instead, contact your state or local municipality for instructions on where to and how to properly dispose of this coolant and protect our environment.

If any coolant is spilled onto the ground, contain the spill and call the state authorities and ask for proper instruction on how to clean up the spill.

*Reserve alkalinity (RA) is a term used to indicate the amount of alkaline inhibitors present in an antifreeze formulation. It is incorrect to relate a high RA with a high-quality antifreeze. Present state-of-the-art antifreeze formulations contain many new inhibitors which give added protection to certain metals but do not raise the RA number.
